This article is a complete guide to Photoshop. If you already know how to use Photoshop, you can skip to the next section. When to Use Photoshop Before you start using Photoshop, there are several questions you must ask yourself about the image you're going to edit. Is it too dark? Is it too light? What are the primary colors in the subject? Colors Saturation, Hue, and Luminance Saturation affects the colors in the subject. Hue affects the colors in the subject. Luminance affects the actual brightness of the subject. Saturation When you work in Photoshop, you can manipulate the individual colors within a photo with the Saturation slider. The goal of this slider is to add or remove colors from the image. A color-balanced photo (with both vivid colors and neutral colors) should have less saturation. Hue The Hue slider is used to add or subtract color from the image. It works much like the Saturation slider, but instead of reducing the amount of color in the photo, it causes the colors in the photo to shift slightly, causing the photo to appear out of color balance. Luminance The luminance slider controls the actual brightness of the photo. Adjusting the luminance slider will change the exposure. It doesn't add or subtract color; it simply brightens or darkens the photo in the same way that an exposure slider does. A common misconception is that the slider called "Lightroom" is related to the luminance slider in Photoshop. While Lightroom can be used to open a RAW file and modify the luminance slider in Adobe Camera Raw, it can't change the luminance of the photo itself.

Increasing the Saturation, Hue, and Luminance Using the Burn, Dodge, or Sponge tools With the Burn tool, click and drag to increase the saturation of the foreground color to a specific percentage, as in this example: With the Dodge tool, click and drag to decrease the saturation of the foreground color to a specific percentage, as in this example: With the Sponge tool, drag to create a creamy effect, as in this example: Alternatives to the Burn, Dodge, and Sponge tools are also available to enhance colors. The Sponge tool can be used to swap two colors, and the Color Replacement tool can be used to swap colors on specific areas of the image. The Color Replacement
